First Order for BIOND® Ballast Water Technology

Buonas, 22nd March 2011 – The first BIOND® ballast water treatment system has been produced and will be delivered to the designated dock.

The BIOND® ballast water technology sets itself apart due to its superior efficiency and environmental compatibility. With this technology, the requirements of American and European organizations and of the legislators are met and in part are even exceeded.

The demands for a restriction of the transfer of local biomass to geographically foreign areas is implemented actively through the use of the BIOND® ballast water technology this way.

BIOND® ballast water treatment plants have a capacity range of 200 m³/h to 5,000 m³/h, and they are compact, cost-effective and reliable. Therefore, MAC Capital AG is very well positioned within this segment. The Federal Maritime Agency estimates that by the year 2016 more than 50,000 ships worldwide will have to be equipped with a ballast water treatment system in accordance with the International Maritime Organization (IMO) guideline.

About MAC Capital AG:
