

MAC Capital AG acquires patent rights for the IONERGY(R) wastewater treatment technology

The holding and project development company MAC Capital AG strengthens its portfolio of investments in the field of water technology

Buonas, 29 September 2010 – MAC Capital AG has acquired the patent and user rights for the IONERGY(R) wastewater treatment plants, which are designed to clean and treat wastewater respectively. With the IONERGY(R) technology wastewater can be, depending on need, processed into industrial water, process water or drinking water. The technology has comparatively low acquisition costs, almost maintenance-free operation, high efficiency, and little space requirement. Its areas of application can be communities, water suppliers, chemical and pharmaceutical companies, the food industry or any other water based industry sectors.

The unique feature of IONERGY(R) is its modular design, i.e. existing technologies whose degree of efficiency or capacity has become too low, can be upgraded with IONERGY(R) wastewater treatment plants in a smart and cost-effective way. According to surveys conducted by the UN pertaining to water technologies, the market for such wastewater treatment plants adds up to several billion euro. Additionally, it can be substantially financed with subsidies, e.g. from the EU.

Worldwide distribution is assured by the Munich based Intaqua International GmbH, of which MAC Capital AG holds 51%. Thanks to their existing distribution strength and networks, ongoing revenues can be expected. Well known producers of water technology assure the required production of the plants. This allows the production capacity to be expanded by several hundred plants per year.

IONERGY(R) technology excellently complements the existing grey and black water circuit systems of Intaqua International GmbH, which are already marketed worldwide with great success. By acquiring this technology, MAC Capital AG expands its investment portfolio in the targeted green technology sector with an innovative technology in the field of water technology, which fulfills effectively the market's current requirements.

**About MAC Capital AG:**

MAC Capital AG is a holding and project development company based in Switzerland. The main fields of investment for MAC Capital AG are green technologies and renewable energies. Additional fields of investment of MAC Capital AG are resources and other promising opportunities. MAC Capital AG makes its proceeds from shareholding, profit distribution of subsidiaries and exit strategies, in addition to project development through royalties, commissions and other proceeds..
